Usability and Security of Out-Of-Band Channels in Secure Device Pairing Protocols

Ronald Kainda, Ivan Flechais, and A.W. Roscoe

Oxford University Computing Laboratory

SOUPS Conference

15-17 July, 2009

▲ロト ▲帰下 ▲ヨト ▲ヨト - ヨー の々ぐ

Introduction - HISPs Security in HISPs

Technical security

- Security based on formal proofs
- Depends on the size of the digest/fingerprint
- *b*-bits for most protocols

Introduction - HISPs Security in HISPs

Technical security

- Security based on formal proofs
- Depends on the size of the digest/fingerprint
- b-bits for most protocols

Effective security

- Secure systems are socio-technical (Sasse et al.)
- Security of a protocol may depend on human effort
- Humans forget, make mistakes
- These mistakes may result in security failures
- Human failures are not covered by formal proofs
- Increasing technical security (value of b) may reduce effective security

Outline Introduction HISPs - Proposed OOB Methods Experimental Design Results Analysis and Discussion Conclusion

Introduction - Research Question

• Are proposed OOB methods usably secure to guarantee specified technical security?

(日) (日) (日) (日) (日) (日) (日) (日) (日)

Outline

Introduction

- Proposed OOB Methods
- 3 Experimental Design

4 Results

5 Analysis and Discussion

6 Conclusion

Manual comparison

- Devices generate fingerprints
- Fingerprints displayed in appropriate format
- Users compare fingerprints and indicate on the device a match or lack of it
- Devices require display and some form of input method

◆ロト ◆昼 → ◆ 臣 ト ◆ 臣 - 一 臣 - 一 の へ ()・

Manual copying and entering

- One device displays a fingerprint
- User copies and types the fingerprint into one or more devices
- Requires display and keypad
- Efficiency of entry depends on affordances of devices involved

▲ロ ▶ ▲ □ ▶ ▲ □ ▶ ▲ □ ▶ ▲ □ ▶ ● ○ ○ ○

Auxiliary devices

- Rely on secondary devices to transfer/compare information
- Proposed devices include
 - camera phone
 - external storage devices
 - data cable etc
- May require users to carry extra hardware

・ロト ・個ト ・モト ・モト 三日

Short-range wireless channels

- Rely on short range wireless channels
- Require devices to be no more than a few centimetres apart
- Proposed methods include:
 - infra-red
 - light
 - distance bounding¹
- Most methods lack human verification

(日) (日) (日) (日) (日) (日) (日) (日) (日)

¹can also use normal channel

Timing methods

• Rely on transmission of information in well timed intervals

(日) (日) (日) (日) (日) (日) (日) (日) (日)

- Users coordinate the synchronisation
- Examples include
 - shaking devices (Saxena et al.)
 - pressing a button in response to some stimulus

6 Conclusion

Experimental Design - Methods

DEFINITIONS

Method

- refers to a specific mode of comparing/transferring information between devices by humans

Representation

- refers to specific format in which information is presented to users

Method-representation

- refers to a combination of a method and representation

Experimental Design - Method-representations

Dependent variables

- O Time
- O Number of non-security failures
- Oumber of security failures

Independent variable

Method-representation

Experimental Design - Participants

• 30 participants were recruited via online advertisement

Gender	Male: 47%			
	Female: 53%			
Age	18 - 25 40%			
	26 - 35 27%			
	36 - 45 13%			
	46 - 55 3%			
	56 - 65 13%			
	66 - 75 4%			
Education	High School: 27%			
	College: 27%			
	Graduate: 26%			
	Postgraduate: 20%			

ション・ 山田・ 山田・ 山田・ 山田・

Experimental Design - Apparatus

- Devices: Nokia N95 and N73
 - Nokia devices are common
 - Bluetooth enabled
- Software:
 - P2P payment system
 - Device communication using Bluetooth
 - Software created a log of participant's actions
- Digital voice recorder
 - To record interviews
- Questionnaires
 - Enrolment
 - After scenario (AS)
 - After experiment/exit (AE)
- Written instructions

Discussion and Discussion – Security Vs Usability trade-off

◆□ > ◆□ > ◆臣 > ◆臣 > ─ 臣 ─ のへで

Discussion – Security Vs Usability Considerations

- User conditioning
- User motivation
- Security failures
- Attentiveness

Outline

Introduction

- 2 HISPs Proposed OOB Methods
- 3 Experimental Design
- 4 Results
- 5 Analysis and Discussion

6 Conclusion

Conclusion

- Traditional methods are favoured by users
- Currently proposed methods need rethinking about their security/usability
- Security failures are not acceptable
- To achieve human compliance, enforcement is required
