Contents

	Preface	**ix**
1	**An introduction to occam**	**1**
	Processes that do nothing	1
	Sequential processes	2
	Parallel processes	3
	Data declarations	6
	Arrays	7
	Process declarations	9
	Loops and arrays of processes	10
	Expressions	13
2	**Programming structures**	**16**
	Simple sequential processes	16
	Simple parallel processes	17
	Synchronization by control signals	19
	Processes that evaluate expressions	24
	Using parallelism as a tool for program modularity	26
	Using parallelism to resolve structure clash	28
3	**Local time**	**36**
4	**Formatted input and output**	**40**
	Output routines	40
	Input routines	43
5	**In place of interrupts**	**46**
	Managing terminal input	47
	Managing terminal output	49
	Managing echoing	52
	Configuration directives	55
6	**Parallel matrix multiplication**	**58**

7	**Parallel sorting**	**65**
	Sorting strategy	65
	Components of the sorter	67
	Monitoring strategy	70
	Component processes	74
	Display management	76
8	**Conway's game of Life**	**82**
	The Life board	83
	Observation and control	90
	Life	98
9	**Huffman minimum redundancy coding**	**99**
	Representing a coding tree	101
	Constructing a coding tree	103
	Encoding and decoding using a coding tree	107
	Adapting the code to the message	114
10	**The occam notation**	**124**
	Micro-syntax and layout	124
	Notation	126
	Processes	127
	Assignment	127
	Communications	128
	Real-time processes	129
	Constructed processes	129
	Declarations	132
	Named processes	134
	Expressions	135
	Vector expressions	138
	Implementation dependencies	139
	Configuration directives	140
	Index of definitions	142
	Codes of the Programs	**143**
	Input and output routines	144
	Terminal interrupt management	148
	Parallel matrix multiplier	151
	Parallel sorter	154
	Conway's game of Life	162
	Simple Huffman coder	170
	Adaptive Huffman coder	175
	Index	**181**
