

Game Semantics and Block-Structured State

Andrzej Murawski and Nikos Tzevelekos

Oxford University Computing Laboratory

GaLoP, York, March 2009

What this talk is about

Evaluation strategies vs scoping.

- Call-by-value and mobility: RML [AM98], Reduced ML [MT09], etc.
- Call-by-name and blocks: Idealized Algol [AM97].

What this talk is about

Reduced ML

What this talk is about

Evaluation strategies vs scoping.

- Call-by-value and mobility: RML [AM98], Reduced ML [MT09], etc.
- Call-by-name and blocks: Idealized Algol [AM97].

Call-by-value and (base-type) blocks?

- There is a gap.
- Name-mobility has been described as a semantical intricacy of ML-like languages (e.g. [PS98]).

What this talk is about

Reduced ML
Games for Reduced ML [MT09]

Go simpler: RML
Games for RML [AM98]

Example
RML with blocks:
bRML

Observations
Binnocence
A problem
More intensional

Simply-typed λ -calculus with integers and references.

■ Types:

$$\theta ::= \text{unit} \mid \text{int} \mid \text{intref} \mid \theta \rightarrow \theta$$

■ Terms:

$$\begin{aligned} M ::= & x \mid \lambda x.M \mid M M \mid () \mid \Omega \\ & \mid n \mid M \odot M \mid \text{if } M \text{ then } M \text{ else } M \\ & \mid a \mid \text{ref } M \mid !M \mid M := M \end{aligned}$$

$$V ::= n \mid () \mid a \mid x \mid \lambda x.M$$

More intensional

Games for Reduced ML [MT09]

At FoSSaCS: Fully abstract game model for Reduced ML, where full abstraction is achieved with very special plays.

- Participants can only use names available to them:

$$s = m_1^{S_1} \dots m_n^{S_n}, \quad \underline{s} = m_1 \dots m_n$$

a name is available to X at s if it first occurs in an X -move or it is present in X -view of \underline{s} .

More intensional

Games for Reduced ML [MT09]

At FoSSaCS: Fully abstract game model for Reduced ML, where full abstraction is achieved with very special plays.

- Participants can only use names available to them:

$$s = m_1^{S_1} \dots m_n^{S_n}, \quad \underline{s} = m_1 \dots m_n$$

a name is available to X at s if it first occurs in an X -move or it is present in X -view of \underline{s} .

- Moves carry carefully selective stores: to be included in the store a name has to be available to both participants.
- Names adhere to freshness conditions: an X -name which is fresh in the view of the other participant must be fresh.

These plays give full abstraction: see paper for details!

Go simpler: RML
Games for RML [AM98]

Example

RML with blocks:
bRML

Observations

Binnocence

A problem

More intensional

Binnocence can be described as a “recursive version” of 3rd-move-binnocence (*thread-independence*).

A problem

What this talk is about

- Reduced ML
- Games for Reduced ML [MT09]
- Go simpler: RML
- Games for RML [AM98]
- Example
- RML with blocks: bRML
- Observations
- Binnocence
- A problem**
- More intensional

A problem

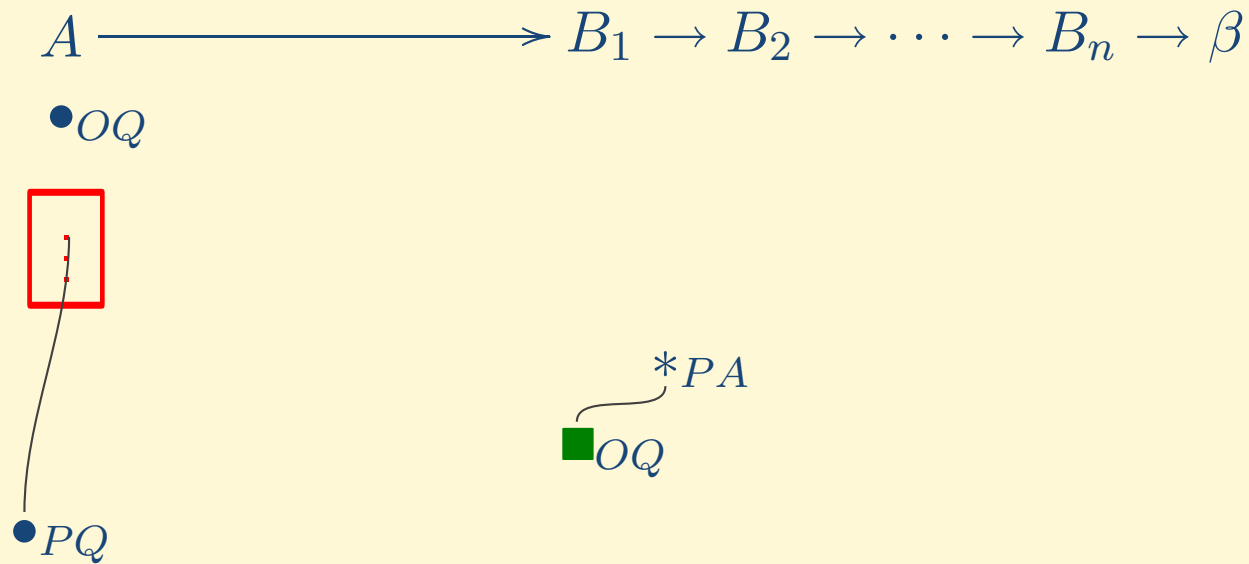

- If the play on the left is non-uniform then P cannot play $\bullet PQ$

What this talk is about

- Reduced ML
- Games for Reduced ML [MT09]
- Go simpler: RML
- Games for RML [AM98]
- Example
- RML with blocks: bRML
- Observations
- Binnocence
- A problem**
- More intensional

A problem

- If the play on the left is non-uniform then P cannot play $\bullet PQ$
- In fact, P cannot play $\bullet PQ$ if it is justified by a move in an open block

What this talk is about

- Reduced ML
- Games for Reduced ML [MT09]
- Go simpler: RML
- Games for RML [AM98]
- Example
- RML with blocks: bRML
- Observations
- Binnocence
- A problem**
- More intensional

- Annotate explicitly blocks in plays.
