Oxford University Department of Computer Science
Undergraduate Supervisory Committee

Examination Conventions for Finals, Part A and B 2023/24

Examination conventions are the formal record of the specific assessment standards for the course or courses to which they apply. They set out how examined work will be marked and how the resulting marks will be used to arrive at a final result and classification of an award.

This document establishes the examining conventions to be used in the following public examinations:

Final Honour School, Part A and B, in Computer Science
Final Honour School, Part A and B, in Mathematics and Computer Science
Final Honour School, Part A and B, in Computer Science and Philosophy

Conventions for papers that fall under the responsibility of the Mathematical Institute or the Faculty of Philosophy are as set out in their examinations conventions.

1 Rubrics

All option courses except for Compilers and Data Visualisation, Deep Learning in Healthcare and Requirements will be assessed by a written in-person exam. For Computer Science written papers, candidates should answer two questions from a choice of three questions. You will have two hours to complete each exam, and each question is out of a total of 25. If there is some reason why you need to have <u>alternative examination arrangements</u>, please get in touch with your college.

Compilers is examined by an assignment and a written 2 hour exam. The assignment will count for 35% of the marks, and the exam will count for 65% of the marks. For the exam, candidates should answer two questions from a choice of three questions.

Data Visualisation, Deep Learning in Healthcare, and Requirements are assessed by a submitted assignment.

2 Marking Scheme

2.1 Written Papers

All questions in Computer Science prelims exams are marked out of 25. Qualitative descriptors for written papers:

≥70	Class I	A very good answer that is structured, innovative and comprehensive
60-69	Class II(i)	A good answer that includes major points and their significance
50-59	Class II(ii)	An answer where good progress has been made but missing some important aspects.
40-49	Class III	A weak answer that omits several major points
39-30	Pass	A very poor answer that fails to address considerable areas of the question
<30	Fail	A totally inadequate answer.

2.2 Submitted Assignments (Mini-Projects)

Qualitative descriptors for mini-projects:

First Class (70–100): The candidate has demonstrated an excellent understanding of almost all of the material covered with a commensurate quality of presentation and has completed almost all of the assignment satisfactorily, further subdivided by: (90–100): The candidate has shown considerable originality and insight going well beyond the straightforward completion of the task set. (80–89): The work submitted shows a near-perfect completion of the task at hand, but does not meet the additional requirements above, or does but has some defects in presentation. (70–79): The work submitted is of a generally high order, but may have minor errors in content and/or deficiencies in presentation.
Upper second class (60-69): The candidate has demonstrated a good or very good understanding of much of the material, and has completed most of the assignment satisfactorily, without showing the level of excellence expected of the above USM range.

Lower second class (50-59)**:** The candidate has demonstrated an adequate understanding of the material and an adequate ability to apply their understanding, without showing the level of understanding expected of the above USM range.
Third class (49-40): The work submitted, while sufficient in quantity, suffers from sufficient defects to show a lack of adequate understanding or ability to apply results.
Pass (30–39): The candidate, while attempting a significant part of the mini-project, has displayed a very limited knowledge or understanding at the level required.
Fail: (0–29): The candidate has either attempted only a fragment of a mini-project or has shown an inadequate grasp of basic material.

2.3   Computer Science Project

Each project dissertation will be blind marked by at least two markers, excluding the supervisor. Each marker will independently write a brief report on the dissertation, giving careful consideration to context, contribution, competence, criticism and clarity. Each marker will independently suggest an overall mark, in accordance with the standard Computer Science project marking scheme. The markers will then agree on a final mark, and write a brief report on how they arrived at this mark. Where the markers cannot agree on a mark, a third reader will be used to moderate.

Projects are marked on a scale from 0 to 100. Qualitative descriptors for projects:

First class (70-100): For a mark in this range the project should satisfy nearly all the following main criteria: • addresses a well-rounded collection of relevant concerns; • uses appropriate technology; shows some aspects of originality in concept or implementation; • involves a significant amount of analysis or assessment of results; • is written up in a clear report. Only the top 5% of projects will normally be awarded a mark above 80, reflecting outstanding originality or a report of publication quality.
Upper second class (60-69): A project report that achieves most of its aims, but does not address some of the appropriate concerns, or follows an obvious implementation path, or has not been appropriately analysed or assessed, or is written up in a less clear report.
Lower second class (50-59): A project that may represent a start on a feasible plan, but leaves substantial parts still to be completed. Alternatively, a project that fails to address many of the appropriate concerns, or is far too unambitious, lacks any analysis, or is very unclear.
Third class (40-49): A project, perhaps with fragments only of a program, and a plan that remains vague. Alternatively, a project that shows poor understanding of the relevant area,

or contains serious errors, or is very incomplete.
Pass (30-39): Marks below 40 may be awarded for very insubstantial reports indicating little serious engagement with the material. The project report, while sufficient in quantity, suffers sufficient defects to show a very limited knowledge or understanding at the level required.
Fail (0-29): The project report shows an attempt at only a fragment of a project or has shown an inadequate grasp of basic material.

To arrive at these marks, the assessors are asked to consider the following questions:

- **Background**: does the report show a good appreciation of the context to the work, giving suitable motivation, relevant background and appropriate references?

- **Competence**: does the report demonstrate that the student understood the topic or area of the project, and applied techniques learned in the degree course appropriately?

- **Evaluation:** does the candidate analyse the results of the technical work appropriately in order to assess its effectiveness or formulate and answer scientific questions that arise from it?

- **Clarity**: is the report written in a way that is readable and clear for the non-specialist, but with appropriate level of detail to document the work done?

The report must not exceed 5,000 words plus 40 pages of additional material (e.g. diagrams, program text). The word count may exclude any table of contents, all mathematical equations and symbols, diagrams, tables, bibliography and the texts of computer programs. However, any preface, footnotes, and appendices must be included. The certificate of authorship must also include a statement as to the word length, and of the method by which the figure was reached. Project markers may deduct marks for any failure to meet these conditions.

2.4   Mathematics Dissertation

Please consult the Mathematics Examination Conventions on the website of the Mathematical Institute.

2.5   Philosophy Thesis

Please see Appendix A below.

3 Moderation and classification

The Examiners translate the raw marks on each paper into University Standardised Marks (USMs) out of 100.

Agreed final marks for individual papers will be expressed using the following scale:

70-100	First Class
69-60	Upper second class
59-50	Lower second class
49-40	Third Class
39-30	Pass
29-0	Fail

For most Computer Science papers, model solutions are provided. Each script is marked by an examiner or assessor and is checked independently to ensure that all parts have been marked and the marks and part-marks have been correctly recorded. Essay-type questions without a model solution will be double-marked.

Mitigating Circumstances Notices to Examiners will be taken into consideration at the exam board stage.

3.1 Scaling

For written examination papers, the Examiners may choose to scale marks where in their academic judgement:
   a) a paper was more difficult or easy than in previous years, and/or
   b) an option paper was more or less difficult than other option papers taken by students in a particular year, and/or
   c) a paper has generated a spread of marks which are not a fair reflection of student performance on the University's standard scale for the expression of agreed final marks, i.e. the marks do not reflect the qualitative marks descriptors.

Such scaling is used to ensure that candidates are not advantaged or disadvantaged by any of these situations. In each case, examiners will establish if they have sufficient evidence for scaling. Scaling will only be considered and undertaken after moderation of a paper has been completed, and a complete run of marks for all papers is available.

If it is decided that it is appropriate to use scaling, the examiners will review a sample of papers either side of the classification borderlines to ensure that the outcome of scaling

is consistent with academic views of what constitutes an appropriate performance within each class.

Detailed information about why scaling was necessary and how it was applied will be included in the Examiners' report and the algorithms used will be published for the information of all examiners and students.

4 Penalties

4.1   Penalties for non-attendance

Failure to attend an examination, except when <u>prevented by illness or other urgent cause</u> and approved by the Proctors, will result in the failure of the whole Second Public Examination/Part.

4.2   Penalties for non-submission

Failure to submit a mini-project or project report, except when <u>prevented by illness or other urgent cause</u> and approved by the Proctors, will result in the failure of the whole Examination/Part.

4.3   Short-weight convention and departure from rubric

The maximum deduction that can be made for short weight should be equivalent to the proportion of the answer that is missing.

Where a candidate has failed to answer a compulsory question, or failed to answer the required number of questions in different sections, the complete script will be marked and the issue flagged. The board of examiners will consider all such cases so that consistent penalties are applied.

4.4   Penalties for late or non-submission of mini-projects and project reports

The scale of penalties agreed by the board of examiners in relation to late submission of Mini-Projects or Project reports is set out below. Details of the circumstances in which such penalties might apply can be found in the Examination Regulations (Regulations for the Conduct of University Examinations, Part 14.)

Lateness	Cumulative penalty
Up to 12 hours	10 marks
12 – 48 hours	20 marks
48 – 72 hours	30 marks
72 – 96 hours	40 marks
96 hours – 14 days	50 marks
More than 14 calendar days after the notice of non-submission	Fail

Penalties will only be applied after the work has been marked and the Exam Board has checked whether there are any valid reasons for late submission. All deducted marks are USMs.

Failure to submit a required element of assessment will result in the failure of the whole part.

4.5   Penalties for over-length work

Where a candidate submits a piece of written coursework which exceeds the word or page limit prescribed by the relevant regulation, or, for mini-projects, indicated in the relevant rubric, the examiners, if they agree to proceed with the examination of the work, may reduce the mark by up to one class (i.e. from a 1st to a 2:1, or its equivalent).

4.6   Penalties for plagiarism

Candidates must avoid plagiarism in all submitted work. Plagiarism includes the deliberate or inadvertent lack of acknowledgement of the words or ideas of others, paraphrasing, collusion, inaccurate citation, failure to acknowledge assistance, or use of material written by professional agencies or other persons. Candidates are advised to consult Appendix A of the General Course Handbook, the University's online guide and complete the online course in avoiding plagiarism. It is permissible to include material from a source such as a textbook, an academic paper or the Internet provided a clear reference to the source is included. There is no need to give a reference to material taken from lecture notes.

Assessors should mark work on its academic merit. Depending on their severity, cases of suspected plagiarism may be referred to the Proctors for investigation or may be dealt with by the board of examiners. If dealt with by the board of examiners (i.e. if material under review is less than 10% of the whole) as a case of poor academic practice, the examiners may deduct up to 10% of the marks available for the assessment. Where the consequence of the marks deduction would result in failure of the assessment and of the programme the case must be referred to the Proctors.

If a candidate has previously had marks deducted for poor academic practice or has been referred to the Proctors for suspected plagiarism the case must always be referred to the Proctors.

In addition, the most serious cases of poor academic practice should also always be referred to the Proctors.

While it is not permissible to submit work which has been submitted, either partially or in full, either for your current Honour School or qualification, or for another Honour School or qualification of this University, or for a qualification at any other institution, it is permissible to use work that has been written during the course of your studies (e.g. collections, tutorial essays).

5 Treatment of practicals

Practicals play no part in the classification, provided that candidates achieve a pass mark for their practical work. Candidates who do not achieve a pass mark for their practical work may, at the discretion of the Examiners, be deemed to have failed the examination.

Reports on practicals are marked by the demonstrating staff as each practical has been completed, and the Examiners receive these marks, together with the practical reports themselves. The demonstrating staff are not appointed as Assessors for the purpose of marking practicals, and it is therefore Examiners' responsibility to determine what credit is given for each piece of practical work. The marks given by the demonstrating staff will serve as a guide, using the table below.

The Examiners will give no credit for practical work that was not submitted for marking by the deadline and signed by a demonstrator, unless there are extenuating circumstances.

The following numerical procedure is suggested for processing the marks. Each practical is marked on a scale S+, S, S- that is explained in the Course Handbook. These marks will be converted to numbers using the following scale:

S+	100
S	60
S-	20

The borderlines for passing the practicals are 40 for a Pass and 70 for a Distinction.

The examiners will consider practical work at the end of Part A and Part B, and will consider all practical work submitted in years 2 and 3 at the end of a candidate's third year.

6 Progression Rules and classification conventions

Candidates have to complete Part A in order to progress to Part B. Part A exams are not classified. It is not possible to retake Part A.

6.1 **Qualitative descriptors of classification bands for candidates in Computer Science, Computer Science and Philosophy, or Mathematics and Computer Science, Part B**

First class	(100-70) The candidate shows excellent skills in reasoning, deductive logic and problem-solving. They demonstrate an excellent knowledge of the material, and is able to use that innovatively in unfamiliar contexts.
Upper second class	(69- 60) The candidate shows good or very good skills in reasoning, deductive logic and problem-solving. They demonstrate a good or very good knowledge of much of the material.
Lower second class	(59-50) The candidate shows adequate basic skills in reasoning, deductive logic and problem-solving. They demonstrate a sound knowledge of much of the material.
Third class	(49-40) The candidate shows reasonable understanding of at least part of the basic material and some skills in reasoning, deductive logic and problem-solving.
Pass	(39-30) The candidate shows some limited grasp of basic material demonstrated by the equivalent of an average of one meaningful attempt at a question on each unit of study. A stronger performance on some papers may compensate for a weaker performance on others.
Fail	(29-0) Little evidence of competence in the topics examined; the work is likely to show major misunderstanding and confusion, coupled with inaccurate calculations; the answers to questions attempted are likely to be fragmentary only.

6.2 **Progression and Resits**

The Examiners may consider setting examinations after the main exam period and prior to the student commencing Part B, for Part A candidates. This would usually be

considered in cases where a significant number of exams were missed, with the approval of the Proctors, or other similar circumstances.

A candidate who is awarded a Fail at Part B may retake Part B on at most one subsequent occasion, within a year. Candidates who initially failed Part B are not permitted to continue to Part C.

7 Final outcome rules

The average USM is rounded to the nearest integer, with fractions of exactly half a mark being rounded up.

7.1 Computer Science

Computer Science core course	weight 10
Computer Science A1 course	weight 10
Computer Science A2 course	weight 14
Computer Science B1 & B2 course	weight 14
Computer Science Project (Part B)	weight 28

In Computer Science, Part A candidates will take four core courses and four option courses from Schedules A1 and A2. In Part B candidates must either: take a total of six option courses from Schedules B1 and B2 (with no more than two from Schedule B2) and a project report (the third-year project counts as two courses); or take a total of eight option courses from Schedules B1 and B2 (with no more than two from Schedule B2).

For Computer Science, the weighted mean of the marks is computed by multiplying the marks for individual courses by the weights shown above, adding them all up, and then dividing the total by the total weight.

7.2 Mathematics and Computer Science

Computer Science core course	weight 10
Computer Science A1 course	weight 10
Computer Science A2 course	weight 14
Maths core paper A0 (Part A)	weight 8
Maths core paper A2 (Part A)	weight 16
Maths options paper (Part A)	weight 8
Computer Science B1 course	weight 14

Mathematics options paper (Part B)	weight 14
Mathematics projects/essays	weight 28

In Mathematics and Computer Science, Part A candidates take two Computer Science core courses and two option courses from Schedules A1(M&CS) and A2(M&CS), and four Maths papers. In Part B, candidates must offer eight option courses from Schedules B1(M&CS), B2(M&CS) subject to the conditions that: they offer at least two courses from Schedule B1(M&CS); they offer at least two courses from Schedule B2(M&CS).

For Mathematics and Computer Science, the weighted mean of the marks is computed by multiplying the marks for individual courses by the weights shown above, adding them all up, and then dividing the total by the total weight.

7.3   Computer Science and Philosophy

Computer Science core course	weight 10
Computer Science A1 course	weight 10
Computer Science A2 course	weight 14
Computer Science B1 & B2 course	weight 14
Philosophy course	weight 28

In Computer Science and Philosophy, Part A, each candidate takes two Computer Science courses (Models of Computation and Algorithms) (total weight 20). In addition, candidates must offer at least two and no more than four option subjects courses from Schedules A1(CS&P) and A2(CS&P). For Part B examination, candidates must choose between two and six Computer Science courses from Schedules, B1(CS&P) and, B2(CS&P). Students take three, four or five Philosophy courses to be examined at Part B.

The weighted average C is computed using the weights in the table above using only Computer Science papers. The weighted average P is computed using the weights in the table above using only Philosophy papers. Let k be the number of philosophy papers attempted by the candidate, where $k \in \{3, 4, 5\}$. The average A is computed using the formula, $A = ((8 - k) \cdot C + k \cdot P)/8$; i.e. the weighted joint average is computed in accordance with the fraction of papers written in the two subjects. The quantities C, P and A are then rounded to the nearest integer, with a fraction of exactly half being rounded up. From now on, C, P and A will represent the rounded integer values. The classification is determined by the following rules.

No candidate will be given a classification lower than that implied by the place of the value of A in the Table in Section 6.1, i.e. 70-100 First; 60-69 Upper Second; 50-59 Lower Second; 40-49 Third; 30-39 Pass; 0-29 Fail.

In the following circumstances a candidate will be given a higher classification than that implied by the value of A:

- A candidate will be awarded a First provided $A \geq 67$, and either of the following hold.
  * $C \geq 70$, $P \geq 60$ and $k \leq 4$
  * $C \geq 60$, $P \geq 70$ and $k \geq 3$
- A candidate will be awarded an Upper Second if they cannot be awarded a First using any of the rules above, provided $A \geq 57$, and either of the following hold.
  * $C \geq 60$, $P \geq 50$ and $k \leq 4$
  * $C \geq 50$, $P \geq 60$ and $k \geq 3$

When special exemptions have been granted to candidates to deviate from the regulations, or when giving consideration to progression to Part C owing to mitigating circumstances, examiners may choose to award a higher classification than that implied by the above rules by individual consideration.

8 Mitigating circumstances notices to examiners (MCEs)

A candidate's final outcome will first be considered using the classification rules/final outcome rules as described above in section 8. The exam board will then consider any further information they have on individual circumstances.

Where a candidate or candidates have made a submission, under Part 13 of the Regulations for Conduct of University Examinations, that unforeseen circumstances may have had an impact on their performance in an examination, a subset of the board (the 'Mitigating Circumstances Panel') will meet to discuss the individual applications and band the seriousness of each application on a scale of 1-3 with 1 indicating minor impact, 2 indicating moderate impact, and 3 indicating very serious impact. The Panel will evaluate, on the basis of the information provided to it, the relevance of the circumstances to examinations and assessment, and the strength of the evidence provided in support. Examiners will also note whether all or a subset of papers were affected, being aware that it is possible for circumstances to have different levels of impact on different papers. The banding information will be used at the final board of examiners meeting to decide whether and how to adjust a candidate's results. Further information on the procedure is provided in the Examination and Assessment Framework, Annex E and information for students is provided at https://www.ox.ac.uk/students/academic/exams/problems-completing-your-assessment

9 Details of Examiners and rules on communication with examiners

Candidates **should not under any circumstances** seek to make contact with individual examiners for matters related to the conduct of examination.

Prof. Edith Elkind (Chair of Examiners)
Prof. Alessandro Abate
Prof. Andreas Galanis
Dr Mike Spivey
Prof. Dominik Wojtczak (External)

Appendix A: Philosophy Marking Conventions

Submitted work (theses/extended essays)

1st: 100 to 70 Upper: 84+	Exceptional work displaying originality, outstanding analytical and argumentative skills, superior command of a wide range of facts and arguments relevant to the question, excellent organisation and presentation, lucid and precise expression
Middle: 81, 78	Excellent work offering high-level analysis, independent and rigorous argument, critical understanding of a wide range of relevant material, transparent organisation and presentation, lucid and precise expression.
Lower: 75, 72	Strong work displaying a high standard of analysis and argument, critical insight, and a thorough command of the relevant material; transparent organisation and presentation; clear and precise expression.
2i: 69-60 Upper: 69 to 65	+ Effective analysis and argumentation, demonstrating thorough command of relevant material; transparent organisation and presentation of material; clarity of expression. - Occasional imprecision in argumentation or expression; or lack of depth; or minor omissions; or lapses in focus
Lower: 60-64	**+** Clearly structured and generally coherent discussion, offering a mostly accurate analysis of central arguments and themes, and a justified conclusion. - Occasional lapses in argumentation; writing may be somewhat pedestrian or showing unclarity or imprecision of expression; some omissions or infelicity in organisation of material and/or presentation (e.g. missing or incomplete references, misquotations or misattributions).
2ii: 59-50 Upper: 59 to 55	+ Adequate, if somewhat basic, analysis and understanding of key concepts and arguments; generally cogent and well-structured treatment of topic.

Lower: 54-50	- Lacking in scope, depth or precision; pat or pedestrian representation of thoughts and arguments; important inaccuracies or omissions; some lapses in argumentation and/or presentation. **+** Discussion showing a reasonable grasp of basic material and arguments, and a fair attempt to arrive at a reasoned conclusion. - Significant inaccuracies or omissions; major lapses in argumentation (e.g. nonsequiturs, misuse of concepts or evidence affecting overall conclusions); failure to digest material; minor irrelevance; sloppy presentation.
3rd: 49-40 Upper: 49 to 45	**+** Limited treatment of topic showing some familiarity with relevant material and arguments; recognisable structure. - Superficial or incomplete treatment; gaps or mistakes in understanding of key concepts and arguments; poor focus and organisation; some irrelevance; poor presentation.
Lower: 44-40	**+** Significant elements of a basic and relevant answer showing some structure. **-** Muddled argumentation, very superficial discussion with poor focus, significant misunderstanding of key concepts and arguments; considerable irrelevance; incomplete answer; substandard presentation.
Pass: 39 to 30	+ Limited attempt to address question showing a basic grasp of some relevant material. - Seriously incomplete answer; fundamental misunderstanding of key arguments or ideas; significant portions of discussion irrelevant or tangential; basic failures of organisation and presentation.
Fail: 29-0 Upper: 29-15	+ Very limited attempt to answer question; some use of relevant material. - Wholly inadequate answer, discussion largely irrelevant; unacceptably poor organisation and/or presentation.
Lower 14-0:	- Completely or almost completely irrelevant or ignorant answer. A very short piece of work, providing no or negligible evidence of study.

Written examinations

1st: 100 to 70 Upper: 84+	Exceptional answer displaying originality, outstanding analytical and argumentative skills, superior command of a wide range of facts and arguments relevant to the question, excellent organisation and presentation, lucid and precise expression
Middle: 81, 78	Excellent work offering high-level analysis, independent and rigorous argument, skilled handling of the facts and arguments relevant to the question, transparent organisation and presentation, lucid and precise expression.
Lower: 75, 72	Strong work displaying a high standard of analysis and argument, a thorough command of the facts/figures relevant to the question; transparent organisation and clear language.
2i: 69-60 Upper: 69 to 65	+ Effective analysis and argumentation, through command of evidence, clarity of expression, transparent organisation of material. - Occasional imprecision in argumentation or expression; or lack of depth; or minor omissions; or lapses in focus
Lower: 64-60	**+** Well-structured answer offering a generally accurate analysis of central arguments and themes, and well-reasoned conclusion. - Occasional lapses in argumentation; writing may be somewhat pedestrian or unclear or imprecise; some omissions or infelicity in organisation of material.
2ii: 59-50 Upper: 59 to 55	+ Adequate, if somewhat basic, analysis and understanding of key concepts and arguments. - Significantly lacking in scope, depth or precision; pat or pedestrian representation of thoughts and arguments; important inaccuracies or omissions; some lapses in argumentation.
Lower: 54-50	**+** Answer showing a basic grasp of relevant material and arguments, and a fair attempt to arrive at a reasoned conclusion. - Serious inaccuracies or omissions; significant lapses in argumentation (e.g. nonsequiturs, misuse of concepts or evidence); failure to digest material; minor irrelevance.

3rd: 49-40	
Upper: 49 to 45	**+** Limited answer to the question; constructs a rudimentary argument; some evidence of relevant study. - Superficial or incomplete treatment; gaps or mistakes in understanding of key concepts and arguments; poor focus and organisation; some irrelevance.
Lower: 44-40	**+** Significant elements of a basic and relevant answer. **-** Muddled argumentation, very superficial discussion with poor focus, significant misunderstanding of key concepts and arguments; considerable irrelevance; seriously incomplete answer.
Fail: 39-0	
Upper: 39-30	+ Limited attempt to address question showing a rudimentary grasp of some relevant information. - Very incomplete, brief, or poorly organised answer; fundamental misunderstanding of key arguments or ideas, large portions of discussion irrelevant or tangential.
Middle: 29-15	+ Some slight evidence of a proper attempt to answer question; glimpse of relevant material. - Extremely limited and inadequate answer, for instance in note form; discussion mostly irrelevant.
Lower: 14-0	- Completely or almost completely irrelevant or ignorant answer. Nothing or almost nothing written.

The class boundaries and class descriptors for all classes remain the same across all Honour Schools involving Philosophy.
