

COMPUTING STABLE MODELS FOR NONMONOTONIC EXISTENTIAL RULES

Despoina Magka, Markus Krötzsch, Ian Horrocks

Department of Computer Science, University of Oxford

IJCAI, 2013

THE OWLS ARE NOT WHAT THEY SEEM

- OWL widely used for authoring **biomedical ontologies**

THE OWLS ARE NOT WHAT THEY SEEM

- OWL widely used for authoring **biomedical ontologies**

THE OWLS ARE NOT WHAT THEY SEEM

- OWL widely used for authoring **biomedical ontologies**

- Not marked for its ability to model **cyclic** structures

THE OWLS ARE NOT WHAT THEY SEEM

- OWL widely used for authoring **biomedical ontologies**

- Not marked for its ability to model **cyclic** structures
- Such structures **abound** in life science (and other) domains

THE OWLS ARE NOT WHAT THEY SEEM

- OWL widely used for authoring **biomedical ontologies**

- Not marked for its ability to model **cyclic** structures
- Such structures **abound** in life science (and other) domains

NONMONOTONIC EXISTENTIAL RULES

- Rules with **nonmonotonic negation** in the body and **existentials** in the head

$$B_1 \wedge \dots \wedge B_n \wedge \mathbf{not} B_{n+1} \wedge \dots \wedge \mathbf{not} B_m \rightarrow \exists \mathbf{y}. H_1 \wedge \dots \wedge H_k$$

NONMONOTONIC EXISTENTIAL RULES

- Rules with **nonmonotonic negation** in the body and **existentials** in the head

$$B_1 \wedge \dots \wedge B_n \wedge \mathbf{not} B_{n+1} \wedge \dots \wedge \mathbf{not} B_m \rightarrow \exists \mathbf{y}. H_1 \wedge \dots \wedge H_k$$

- Interpreted under **stable model semantics**

NONMONOTONIC EXISTENTIAL RULES

- Rules with **nonmonotonic negation** in the body and **existentials** in the head

$$B_1 \wedge \dots \wedge B_n \wedge \mathbf{not} B_{n+1} \wedge \dots \wedge \mathbf{not} B_m \rightarrow \exists \mathbf{y}. H_1 \wedge \dots \wedge H_k$$

- Interpreted under **stable model semantics**
- Good for representing **non-tree-shaped** structures

NONMONOTONIC EXISTENTIAL RULES

- Rules with **nonmonotonic negation** in the body and **existentials** in the head

$$B_1 \wedge \dots \wedge B_n \wedge \mathbf{not} B_{n+1} \wedge \dots \wedge \mathbf{not} B_m \rightarrow \exists \mathbf{y}. H_1 \wedge \dots \wedge H_k$$

- Interpreted under **stable model semantics**
- Good for representing **non-tree-shaped** structures
 - Existentials allow us to **infer new structures**

NONMONOTONIC EXISTENTIAL RULES

- Rules with **nonmonotonic negation** in the body and **existentials** in the head

$$B_1 \wedge \dots \wedge B_n \wedge \mathbf{not} B_{n+1} \wedge \dots \wedge \mathbf{not} B_m \rightarrow \exists \mathbf{y}. H_1 \wedge \dots \wedge H_k$$

- Interpreted under **stable model semantics**
- Good for representing **non-tree-shaped** structures
 - Existentials allow us to infer new structures
 - Nonmonotonicity adds **extra expressivity** in modelling

NONMONOTONIC EXISTENTIAL RULES

- Rules with **nonmonotonic negation** in the body and **existentials** in the head

$$B_1 \wedge \dots \wedge B_n \wedge \mathbf{not} B_{n+1} \wedge \dots \wedge \mathbf{not} B_m \rightarrow \exists \mathbf{y}. H_1 \wedge \dots \wedge H_k$$

- Interpreted under **stable model semantics**
- Good for representing **non-tree-shaped** structures
 - Existentials allow us to infer new structures
 - Nonmonotonicity adds extra expressivity in modelling
 - Stable model semantics supported by many **tools**: DLV, clasp, ...

- 3 Generalise R-acyclicity and R-stratification with **constraints**
↪ new conditions Π_2^P -complete to check
- 4 **Experiments** over ChEBI with DLV
 - **Performance gains** in DLV using R-stratification
 - **Missing subsumptions** from ChEBI ontology

POSITIVE RELIANCES

- Rule r_2 **positively relies** on r_1 (written $r_1 \xrightarrow{+} r_2$): there is a situation when r_1 can **trigger** r_2 to derive something new

POSITIVE RELIANCES

- Rule r_2 **positively relies** on r_1 (written $r_1 \xrightarrow{+} r_2$): there is a situation when r_1 can **trigger** r_2 to derive something new

EXAMPLE

r_1 : $\bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge$
 $\text{c}(z_1) \wedge \text{o}(z_2) \wedge \text{h}(z_3) \wedge$
 $\text{bond}(z_1, z_2) \wedge \text{bond}(z_2, z_3) \rightarrow \text{organicHydroxy}(x)$

r_2 : $\text{organicHydroxy}(x) \rightarrow \exists_{i=1}^3 y_i. \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i) \wedge$
 $\text{c}(y_1) \wedge \text{o}(y_2) \wedge \text{h}(y_3) \wedge$
 $\text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3)$

POSITIVE RELIANCES

- Rule r_2 **positively relies** on r_1 (written $r_1 \xrightarrow{+} r_2$): there is a situation when r_1 can **trigger** r_2 to derive something new

EXAMPLE

$$\begin{aligned} r_1 : & \quad \bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge \\ & \quad \text{c}(z_1) \wedge \text{o}(z_2) \wedge \text{h}(z_3) \wedge \\ & \quad \text{bond}(z_1, z_2) \wedge \text{bond}(z_2, z_3) \rightarrow \text{organicHydroxy}(x) \\ r_2 : & \quad \text{organicHydroxy}(x) \rightarrow \exists_{i=1}^3 y_i \cdot \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i) \wedge \\ & \quad \text{c}(y_1) \wedge \text{o}(y_2) \wedge \text{h}(y_3) \wedge \\ & \quad \text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3) \end{aligned}$$

$$r_1 \xrightarrow{+} r_2$$

POSITIVE RELIANCES

- Rule r_2 **positively relies** on r_1 (written $r_1 \xrightarrow{+} r_2$): there is a situation when r_1 can **trigger** r_2 to derive something new

EXAMPLE

r_1 : $\bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge$
 $\text{c}(z_1) \wedge \text{o}(z_2) \wedge \text{h}(z_3) \wedge$
 $\text{bond}(z_1, z_2) \wedge \text{bond}(z_2, z_3) \rightarrow \text{organicHydroxy}(x)$

r_2 : $\text{organicHydroxy}(x) \rightarrow \exists_{i=1}^3 y_i. \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i) \wedge$
 $\text{c}(y_1) \wedge \text{o}(y_2) \wedge \text{h}(y_3) \wedge$
 $\text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3)$

$r_1 \xrightarrow{+} r_2$

but

$r_2 \not\xrightarrow{+} r_1$

POSITIVE RELIANCES

- Rule r_2 **positively relies** on r_1 (written $r_1 \xrightarrow{+} r_2$): there is a situation when r_1 can **trigger** r_2 to derive something new

EXAMPLE

r_1 : $\bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge$
 $\text{c}(z_1) \wedge \text{o}(z_2) \wedge \text{h}(z_3) \wedge$
 $\text{bond}(z_1, z_2) \wedge \text{bond}(z_2, z_3) \rightarrow \text{organicHydroxy}(x)$

r_2 : $\text{organicHydroxy}(x) \rightarrow \exists_{i=1}^3 y_i. \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i) \wedge$
 $\text{c}(y_1) \wedge \text{o}(y_2) \wedge \text{h}(y_3) \wedge$
 $\text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3)$

$r_1 \xrightarrow{+} r_2$ but $r_2 \not\xrightarrow{+} r_1$

- **NP**-complete to check
(but only w.r.t. the size of the rules)

POSITIVE RELIANCES

- Rule r_2 **positively relies** on r_1 (written $r_1 \xrightarrow{+} r_2$): there is a situation when r_1 can **trigger** r_2 to derive something new

EXAMPLE

$$r_1 : \quad \bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge \\ \text{c}(z_1) \wedge \text{o}(z_2) \wedge \text{h}(z_3) \wedge \\ \text{bond}(z_1, z_2) \wedge \text{bond}(z_2, z_3) \rightarrow \text{organicHydroxy}(x)$$

$$r_2 : \quad \text{organicHydroxy}(x) \rightarrow \exists_{i=1}^3 y_i. \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i) \wedge \\ \text{c}(y_1) \wedge \text{o}(y_2) \wedge \text{h}(y_3) \wedge \\ \text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3)$$

$$r_1 \xrightarrow{+} r_2 \quad \text{but} \quad r_2 \not\xrightarrow{+} r_1$$

- NP**-complete to check
(but only w.r.t. the size of the rules)

R-ACYCLICITY

- A program is **R-acyclic**: there is **no cycle of positive reliances** that involves a rule with an existential
 - Checking R-acyclicity is **coNP**-complete
 - Similar to **\prec -stratification** [Deutsch et al., PODS, 2008]; extension of **aGRD** [Baget et al., RR, 2011]

R-ACYCLICITY

- A program is **R-acyclic**: there is **no cycle of positive reliances** that involves a rule with an existential
 - Checking R-acyclicity is **coNP**-complete
 - Similar to **\prec -stratification** [Deutsch et al., PODS, 2008]; extension of **aGRD** [Baget et al., RR, 2011]
- Fact entailment for R-acyclic programs
 - Stable models bounded in size (double exp), but **many models** possible

R-ACYCLICITY

- A program is **R-acyclic**: there is **no cycle of positive reliances** that involves a rule with an existential
 - Checking R-acyclicity is **coNP**-complete
 - Similar to **\prec -stratification** [Deutsch et al., PODS, 2008]; extension of **aGRD** [Baget et al., RR, 2011]
- Fact entailment for R-acyclic programs
 - Stable models bounded in size (double exp), but **many models** possible
 - **coN2ExpTime**-complete w.r.t. program complexity

R-ACYCLICITY

- A program is **R-acyclic**: there is **no cycle of positive reliances** that involves a rule with an existential
 - Checking R-acyclicity is **coNP**-complete
 - Similar to **\prec -stratification** [Deutsch et al., PODS, 2008]; extension of **aGRD** [Baget et al., RR, 2011]

 - **coNP**-complete w.r.t. data complexity

NEGATIVE RELIANCES

- Rule r_2 **negatively relies** on r_1 (written $r_1 \dashv\rightarrow r_2$): there is a situation when r_1 can **inhibit** the application of r_2

NEGATIVE RELIANCES

- Rule r_2 **negatively relies** on r_1 (written $r_1 \multimap r_2$): there is a situation when r_1 can **inhibit** the application of r_2

EXAMPLE

$$\begin{aligned} r_1 : & \bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge \text{c}(z_1) \wedge \\ & \text{o}(z_2) \wedge \text{h}(z_3) \wedge \text{bond}(z_1, z_2) \wedge \\ & \text{bond}(z_2, z_3) \wedge \text{not } g_h(z_1) \wedge \\ & \text{not } g_h(z_2) \wedge \text{not } g_h(z_3) \rightarrow \text{organicHydroxy}(x) \wedge r_h(x) \\ r_2 : & \text{organicHydroxy}(x) \wedge \text{not } r_h(x) \rightarrow \exists_{i=1}^3 y_i. \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i) \\ & \wedge \text{c}(y_1) \wedge \text{o}(y_2) \wedge \text{h}(y_3) \wedge \\ & \text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3) \\ & \wedge g_h(y_1) \wedge g_h(y_2) \wedge g_h(y_3) \end{aligned}$$

NEGATIVE RELIANCES

- Rule r_2 **negatively relies** on r_1 (written $r_1 \neg\rightarrow r_2$): there is a situation when r_1 can **inhibit** the application of r_2

EXAMPLE

r_1 : $\bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge c(z_1) \wedge$
 $o(z_2) \wedge h(z_3) \wedge \text{bond}(z_1, z_2) \wedge$
 $\text{bond}(z_2, z_3) \wedge \text{not } g_h(z_1) \wedge$
 $\text{not } g_h(z_2) \wedge \text{not } g_h(z_3) \rightarrow \text{organicHydroxy}(x) \wedge r_h(x)$

r_2 : $\text{organicHydroxy}(x) \wedge \text{not } r_h(x) \rightarrow \exists_{i=1}^3 y_i. \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i)$
 $\wedge c(y_1) \wedge o(y_2) \wedge h(y_3) \wedge$
 $\text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3)$
 $\wedge g_h(y_1) \wedge g_h(y_2) \wedge g_h(y_3)$

$r_1 \neg\rightarrow r_2$

NEGATIVE RELIANCES

- Rule r_2 **negatively relies** on r_1 (written $r_1 \neg\rightarrow r_2$): there is a situation when r_1 can **inhibit** the application of r_2

EXAMPLE

r_1 : $\bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge \text{c}(z_1) \wedge$
 $\text{o}(z_2) \wedge \text{h}(z_3) \wedge \text{bond}(z_1, z_2) \wedge$
 $\text{bond}(z_2, z_3) \wedge \text{not } \text{g}_h(z_1) \wedge$
 $\text{not } \text{g}_h(z_2) \wedge \text{not } \text{g}_h(z_3) \rightarrow \text{organicHydroxy}(x) \wedge r_h(x)$

r_2 : $\text{organicHydroxy}(x) \wedge \text{not } r_h(x) \rightarrow \exists_{i=1}^3 y_i. \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i)$
 $\wedge \text{c}(y_1) \wedge \text{o}(y_2) \wedge \text{h}(y_3) \wedge$
 $\text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3)$
 $\wedge \text{g}_h(y_1) \wedge \text{g}_h(y_2) \wedge \text{g}_h(y_3)$

$r_1 \neg\rightarrow r_2$

but

$r_2 \not\rightarrow r_1$

NEGATIVE RELIANCES

- Rule r_2 **negatively relies** on r_1 (written $r_1 \not\rightarrow r_2$): there is a situation when r_1 can **inhibit** the application of r_2

EXAMPLE

r_1 : $\bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge \text{c}(z_1) \wedge$
 $\text{o}(z_2) \wedge \text{h}(z_3) \wedge \text{bond}(z_1, z_2) \wedge$
 $\text{bond}(z_2, z_3) \wedge \text{not } g_h(z_1) \wedge$
 $\text{not } g_h(z_2) \wedge \text{not } g_h(z_3) \rightarrow \text{organicHydroxy}(x) \wedge r_h(x)$

r_2 : $\text{organicHydroxy}(x) \wedge \text{not } r_h(x) \rightarrow \exists \bigwedge_{i=1}^3 y_i. \bigwedge_{i=1}^3 \text{hasAtom}(x, y_i)$
 $\wedge \text{c}(y_1) \wedge \text{o}(y_2) \wedge \text{h}(y_3) \wedge$
 $\text{bond}(y_1, y_2) \wedge \text{bond}(y_2, y_3)$
 $\wedge g_h(y_1) \wedge g_h(y_2) \wedge g_h(y_3)$

$r_1 \not\rightarrow r_2$

but

$r_2 \not\rightarrow r_1$

- Polynomial time to check

R-STRATIFICATION

- A program P is **R-stratified** if there is a partition P_1, \dots, P_n of P such that for P_i, P_j and rules $r_1 \in P_i$ and $r_2 \in P_j$, we have:
if $r_1 \overset{+}{\rightarrow} r_2$ then $i \leq j$ and if $r_1 \overset{-}{\rightarrow} r_2$ then $i < j$.

R-STRATIFICATION

- A program P is **R-stratified** if there is a partition P_1, \dots, P_n of P such that for P_i, P_j and rules $r_1 \in P_i$ and $r_2 \in P_j$, we have:
if $r_1 \xrightarrow{+} r_2$ then $i \leq j$ and if $r_1 \xrightarrow{-} r_2$ then $i < j$.

EXAMPLE

R-STRATIFICATION

- A program P is **R-stratified** if there is a partition P_1, \dots, P_n of P such that for P_i, P_j and rules $r_1 \in P_i$ and $r_2 \in P_j$, we have:

 if $r_1 \xrightarrow{+} r_2$ then $i \leq j$ and if $r_1 \xrightarrow{-} r_2$ then $i < j$.

EXAMPLE

R-STRATIFICATION

- A program P is **R-stratified** if there is a partition P_1, \dots, P_n of P such that for P_i, P_j and rules $r_1 \in P_i$ and $r_2 \in P_j$, we have:

if $r_1 \xrightarrow{+} r_2$ then $i \leq j$ and if $r_1 \xrightarrow{-} r_2$ then $i < j$.

EXAMPLE

R-STRATIFICATION

- A program P is **R-stratified** if there is a partition P_1, \dots, P_n of P such that for P_i, P_j and rules $r_1 \in P_i$ and $r_2 \in P_j$, we have:

if $r_1 \xrightarrow{+} r_2$ then $i \leq j$ and if $r_1 \xrightarrow{-} r_2$ then $i < j$.

EXAMPLE

R-STRATIFICATION

- A program P is **R-stratified** if there is a partition P_1, \dots, P_n of P such that for P_i, P_j and rules $r_1 \in P_i$ and $r_2 \in P_j$, we have:
 - if $r_1 \xrightarrow{+} r_2$ then $i \leq j$ and if $r_1 \xrightarrow{-} r_2$ then $i < j$.
- Strictly extends ‘classical’ stratification
 \rightsquigarrow ensures **stable model uniqueness**
- **coNP**-complete to check

R-STRATIFICATION

- A program P is **R-stratified** if there is a partition P_1, \dots, P_n of P such that for P_i, P_j and rules $r_1 \in P_i$ and $r_2 \in P_j$, we have:
 - if $r_1 \xrightarrow{+} r_2$ then $i \leq j$ and if $r_1 \xrightarrow{-} r_2$ then $i < j$.
 - Strictly extends ‘classical’ stratification
 \rightsquigarrow ensures **stable model uniqueness**
 - **coNP**-complete to check
- Fact entailment for R-acyclic, R-stratified programs
 - Stable models bounded in size (double exp),
 and **at most one** stable model

R-STRATIFICATION

- A program P is **R-stratified** if there is a partition P_1, \dots, P_n of P such that for P_i, P_j and rules $r_1 \in P_i$ and $r_2 \in P_j$, we have:

- Fact entailment for R-acyclic, R-stratified programs
 - Stable models bounded in size (double exp),
and **at most one** stable model
 - **2ExpTime**-complete w.r.t. program complexity
 - **PTime**-complete w.r.t. data complexity

RELIANCES UNDER CONSTRAINTS

- Restrict input sets of facts to relax R-acyclicity and R-stratification using **constraints**

RELIANCES UNDER CONSTRAINTS

- Restrict input sets of facts to relax R-acyclicity and R-stratification using **constraints**

EXAMPLE

r_1 : $\text{mol}(x) \wedge \text{hasAtom}(x, z) \wedge \text{c}(z) \rightarrow \text{organic}(x)$

r_2 : $\text{mol}(x) \wedge \text{not organic}(x) \rightarrow \text{inorganic}(x)$

r_3 : $\text{inorganic}(x) \rightarrow \text{mol}(x) \wedge \text{geoOrigin}(x)$

RELIANCES UNDER CONSTRAINTS

- Restrict input sets of facts to relax R-acyclicity and R-stratification using **constraints**

EXAMPLE

r_1 : $\text{mol}(x) \wedge \text{hasAtom}(x, z) \wedge \text{c}(z) \rightarrow \text{organic}(x)$

r_2 : $\text{mol}(x) \wedge \text{not organic}(x) \rightarrow \text{inorganic}(x)$

r_3 : $\text{inorganic}(x) \rightarrow \text{mol}(x) \wedge \text{geoOrigin}(x)$

$$r_1 \xrightarrow{-} r_2 \xrightarrow{+} r_3 \xrightarrow{+} r_1$$

RELIANCES UNDER CONSTRAINTS

- Restrict input sets of facts to relax R-acyclicity and R-stratification using **constraints**

EXAMPLE

r_1 : $\text{mol}(x) \wedge \text{hasAtom}(x, z) \wedge \text{c}(z) \rightarrow \text{organic}(x)$

r_2 : $\text{mol}(x) \wedge \text{not organic}(x) \rightarrow \text{inorganic}(x)$

r_3 : $\text{inorganic}(x) \rightarrow \text{mol}(x) \wedge \text{geoOrigin}(x)$

$C = \{\text{inorganic}(x) \wedge \text{hasAtom}(x, z) \wedge \text{c}(z) \rightarrow \perp\}$

$r_1 \xrightarrow{-} r_2 \xrightarrow{+} r_3 \xrightarrow{+} r_1$

RELIANCES UNDER CONSTRAINTS

- Restrict input sets of facts to relax R-acyclicity and R-stratification using **constraints**

EXAMPLE

r_1 : $\text{mol}(x) \wedge \text{hasAtom}(x, z) \wedge \text{c}(z) \rightarrow \text{organic}(x)$

r_2 : $\text{mol}(x) \wedge \text{not organic}(x) \rightarrow \text{inorganic}(x)$

r_3 : $\text{inorganic}(x) \rightarrow \text{mol}(x) \wedge \text{geoOrigin}(x)$

$C = \{\text{inorganic}(x) \wedge \text{hasAtom}(x, z) \wedge \text{c}(z) \rightarrow \perp\}$

$r_1 \xrightarrow{+} r_2 \xrightarrow{+} r_3 \xrightarrow{+} r_1$ but $r_3 \not\xrightarrow{+}_C r_1$

RELIANCES UNDER CONSTRAINTS

- Restrict input sets of facts to relax R-acyclicity and R-stratification using **constraints**

EXAMPLE

r_1 : $\text{mol}(x) \wedge \text{hasAtom}(x, z) \wedge \text{c}(z) \rightarrow \text{organic}(x)$

r_2 : $\text{mol}(x) \wedge \text{not organic}(x) \rightarrow \text{inorganic}(x)$

r_3 : $\text{inorganic}(x) \rightarrow \text{mol}(x) \wedge \text{geoOrigin}(x)$

$C = \{\text{inorganic}(x) \wedge \text{hasAtom}(x, z) \wedge \text{c}(z) \rightarrow \perp\}$

$r_1 \xrightarrow{+} r_2 \xrightarrow{+} r_3 \xrightarrow{+} r_1$ but $r_3 \not\xrightarrow{+}_C r_1$

- Slightly more complex to check:

Positive reliance	Negative reliance	R-acyclicity/R-stratification
Σ_2^P -complete	in Δ_2^P	Π_2^P -complete

$\rightsquigarrow \Sigma_2^P$ -hardness follows from satisfiability of a QBF $\exists \vec{p}. \forall \vec{q}. \varphi$

EXPERIMENTAL SETUP

■ Chemical Entities of Biological Interest

- Reference terminology adopted for chemical annotation by major bio-ontologies
- ~20,000 molecule and ~8,000 chemical class descriptions
- ChEBI taxonomy manually curated

EXPERIMENTAL SETUP

■ Chemical Entities of Biological Interest

- Reference terminology adopted for chemical annotation by major bio-ontologies
 - ~20,000 molecule and ~8,000 chemical class descriptions
 - ChEBI taxonomy manually curated
- Our knowledge base consisted of rules derived from ChEBI that represented

EXPERIMENTAL SETUP

■ Chemical Entities of Biological Interest

- Reference terminology adopted for chemical annotation by major bio-ontologies
 - ~20,000 molecule and ~8,000 chemical class descriptions
 - ChEBI taxonomy manually curated
- Our knowledge base consisted of rules derived from ChEBI that represented
- 500 molecules

EXAMPLE

$$\text{methanol}(x) \rightarrow \exists_{i=1}^6 y_i \cdot \wedge_{i=1}^6 \text{hasAtom}(x, y_i) \wedge \dots \wedge \text{bond}(y_2, y_6)$$

EXPERIMENTAL SETUP

■ Chemical Entities of Biological Interest

- Reference terminology adopted for chemical annotation by major bio-ontologies
 - ~20,000 molecule and ~8,000 chemical class descriptions
 - ChEBI taxonomy **manually** curated
- Our knowledge base consisted of rules **derived from ChEBI** that represented
- 500 molecules
 - 30 molecular part descriptions

EXAMPLE

$$\begin{aligned} &\bigwedge_{i=1}^3 \text{hasAtom}(x, z_i) \wedge \dots \wedge \\ &\text{bond}(z_2, z_3) \wedge \text{not } g_h(z_1) \\ &\wedge \text{not } g_h(z_2) \wedge \text{not } g_h(z_3) \rightarrow \text{organicHydroxy}(x) \wedge r_h(x) \end{aligned}$$
$$\begin{aligned} \text{organicHydroxy}(x) \wedge \text{not } r_h(x) \rightarrow \exists \bigwedge_{i=1}^3 y_i. &\bigwedge_{i=1}^3 \text{hasAtom}(x, y_i) \wedge \dots \\ &\wedge \text{bond}(y_2, y_3) \wedge \bigwedge_{i=1}^3 g_h(y_i) \end{aligned}$$

EXPERIMENTAL SETUP

(coNP-complete to check)

Fact entailment	Program comp.	Data comp.
R-acyclic	coN2ExpTime-complete	coNP-complete
R-acyclic+R-stratified	2ExpTime-complete	PTime-complete

- Generalise with constraints (Π_2^P -complete to check)
- Performance gains in DLV & new subsumptions in ChEBI

CONCLUSIONS

- R-acyclicity and R-stratification conditions
(coNP-complete to check)

Fact entailment	Program comp.	Data comp.
R-acyclic	coN2ExpTime-complete	coNP-complete
R-acyclic+R-stratified	2ExpTime-complete	PTime-complete

- Generalise with constraints (Π_2^P -complete to check)
- Performance gains in DLV & new subsumptions in ChEBI
- Future directions:
 - More general notions of 'rule' + equality in rule heads
[LPNMR'13]

CONCLUSIONS

- R-acyclicity and R-stratification conditions
(coNP-complete to check)

Fact entailment	Program comp.	Data comp.
R-acyclic	coN2ExpTime-complete	coNP-complete
R-acyclic+R-stratified	2ExpTime-complete	PTime-complete

- Generalise with constraints (Π_2^P -complete to check)
- Performance gains in DLV & new subsumptions in ChEBI
- Future directions:
 - More general notions of 'rule' + equality in rule heads
[LPNMR'13]
 - Compare performance with other ASP solvers
[chemical classification problem, ASPCOMP'13]

CONCLUSIONS
