perspective on

matroids

A matroid describes *dependence*.

$$x = ax_1 + bx_2 \quad \dots \text{etc}$$

Extensively used in combinatorial optimisation problems.

matroids

Ground set

- Independent sets
- Maximal independent sets (bases)
- Minimal dependent sets (circuits)
- Closed sets (flats)
- “Maximal” closed sets (hyperplanes)
- Spanning sets
- Rank function
- Closure function
- ...etc

Commonly used matroid constructions

Matroid Theory

matroid
constructions

Strong maps

Categorical
perspective on
matroids

Deletion of an element
Contraction of an element

Minors

Dual matroid

Quotients, Lifts, Extensions, Coextensions

Matroid union, Matroid direct sum

Other matroid sums and products

Strong maps

Matroid Theory

Concept and usage

Definitions

Commonly used
matroid

constructions

Strong maps

Categorical
perspective on
matroids

Functions between the elements of two matroids such that the preimage of a closed set is closed.

- Closest thing to linear transforms
- Applications in graph theory

common
constructions

Objects: Matroids

- All matroids (Matr)
- Loopless (LMatr)
- No dependent sets (FMatr)
- Every rank-1 flat has 1 element (SMatr)
- Representable over k (Matr_k)

Morphisms: Strong maps

Matroid applications as functors

Matroid Theory

Categorical perspective on matroids

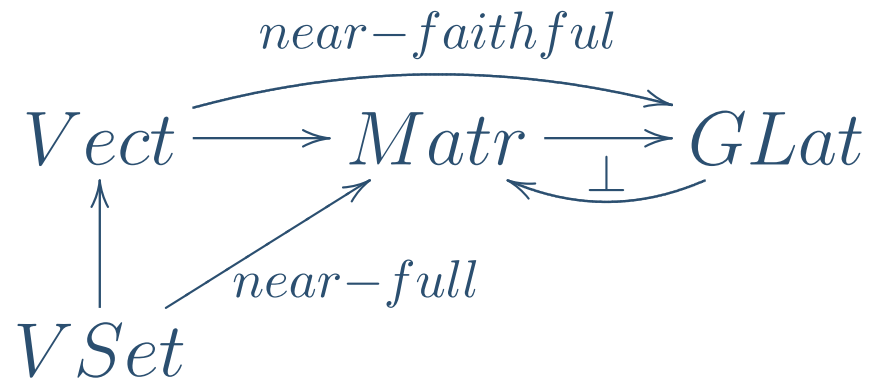

The category

Matroid applications as functors

$$\text{Matr} \begin{array}{c} \xrightarrow{\quad} \\ \perp \\ \xleftarrow{\quad} \end{array} \text{Set}$$

General properties

Matroid Theory

Categorical
perspective on
matroids

The category
Matroid applications
as functors

General properties

Application to
common
constructions

- $Matr \xrightarrow{\quad} Set$
 $\quad \quad \quad \leftarrow \perp \quad \leftarrow$
- Not many limits and colimits

General properties

Matroid Theory

Categorical perspective on matroids

The category
Matroid applications as functors

General properties

Application to common constructions

- $Matr \xrightarrow{\perp} Set$
- Not many limits and colimits
- Various free and cofree constructions

$$\begin{array}{ccc} Matr & \longleftarrow & LMatr \\ \uparrow & \swarrow & \uparrow \\ SMatr & \longleftarrow & FMatr \end{array}$$

General properties

Matroid Theory

Categorical perspective on matroids

The category
Matroid applications as functors

General properties

Application to common constructions

- $Matr \xrightarrow{\perp} Set$
- Not many limits and colimits
- Various free and cofree constructions

- $GLat \xrightarrow{Matroid} Sub$

Application to common contstructions
